

Make progress visible. Make ownership real.

A Kanban-first workshop. Use Word, PowerPoint or paper; no app required.

ALIGN

Agree the outcome.
Choose one useful path.

MOVE

See stage and route.
Show evidence and limits.

HAND OVER

Name an owner.
Set a next action + date.

Daniel Horvath / dahorvath@microsoft.com

Prepared 24 September 2026. Fictional examples. No Microsoft endorsement.

Use the files. Add software only if useful.

Manual facilitation needs no app, agent, Copilot subscription or developer setup.

WORD

Fill the templates.
Duplicate a page per team.
Keep decisions together.

POWERPOINT

Lead the conversation.
Edit the slides.
Use the speaker notes.

PDF

Read or print.
Share an approved copy.
No agent or Copilot needed.

Optional public app under app/ + Copilot agent: follow the repository README. Keep real data private.

Start on Kanban: where is the work?

Progress is one view. Delivery route is a separate way to group the same cards.

Activity: place one fictional card. Name the owner, next action and date. Keep unknowns visible.

App: Kanban is the default; Dashboard is optional. Paper or a shared document works too.

Align the outcome before choosing tools

Manual worksheet, not an app page. Write the answers; name the decision owner.

OUTCOME

What changes for which users?

PEOPLE

Who sponsors, builds, reviews and decides?

BOUNDARIES

What is not in scope? What data is permitted?

PROOF

What would count as a useful result?

Make the case small enough to demo

One input. One useful path. One reviewable output.

INPUT

A permitted sample
with an approved source.

USEFUL PATH

The smallest task that
helps the intended user.

OUTPUT

A result a human can
check against a test.

Before custom build: could a simpler process, existing search or an approved feature solve this?

Unknown is not ready

Eight qualification checks. Record evidence, reviewer, date and scope.

FACTS TO CONFIRM

- Named business owner
- Process-owner attendance
- Approved, usable sample
- Human review or read-only boundary

JUDGMENTS TO REVIEW

- One useful path is demoable
- Production dependencies can be mocked
- Access is resolved or safely mocked
- Prototype, not production rollout

Pass / Not met / Unknown. Resolve, re-scope or defer; never let a score override a missing condition.

Compare value only after qualification

Optional project rubric. Customer priority and votes remain separate.

1-5

Use scores only
with evidence.
Leave unknowns
unscored.

Arithmetic example only: 4 / 3 / 3 / 4 -> 3.5 out of 5. Not a real case assessment.

Prepare early; rehearse as a participant

DLP = data-loss prevention. Use all 13 start checks; the timing below is a project default.

4 weeks

Sponsor + logistics

People, outcome,
judging and venue

3 weeks

Scope + alternatives

Owner presence,
paths and options

2 weeks

Access + capacity

Licenses, metrics,
skills and access

1 week

Data + safeguards

Sample and DLP,
review, channel,
team training

Day 0

Dry run + decision

Test the path;
record go/no-go

Day 1: protect one useful path

Manual agenda, not an app feature. Confirm time zone, breaks and accessibility.

09:00-09:30	Sponsor opening and safety
09:30-10:00	Refresher and team scope
10:00-12:00	Build, break and mentor check
12:00-13:00	Lunch / async catch-up
13:00-14:30	Build and business review
14:30-15:30	Blocker decisions
15:30-16:30	Working path and fallback

CHECKPOINT

What works now?
What is blocked?
Who decides?
What is the permitted fallback?

Day 2: test, then show the evidence

For a three-day event, move this final-day rhythm to Day 3.

09:00-09:30	Working-path checkpoint
09:30-10:00	Finish the agreed slice
10:00-12:00	Test, fix, break and freeze
12:00-13:00	Lunch / async catch-up
13:00-14:30	Demos and backup recording
14:30-15:30	Showcase and judging
15:30-16:30	Owners, dates and retrospective

CHECKPOINT

Freeze new features.
Label mocks clearly.
Use a backup recording.
Do not debug live.

Switch the grouping, not the meaning

Delivery tells you the route. Progress tells you the stage.

Unassigned

Copilot / Cowork

Copilot Studio

Custom build

CAF

ONE HANDOFF

Optional app: cards +
overview share one panel.

Paper or app: one record for
owners, action, date + learning.

Building + Copilot Studio.

CAF route does not mean Submitted to CAF.

Show proof, not promises

Use all six test categories. Record Pass, Fail or Not run honestly.

USEFUL

Expected useful path
Correct, supported answer
Process-owner review

BOUNDED

Missing / denied knowledge
Out-of-scope request
Misleading instructions

CONTROLLED

Human approval for action
Or an explicit read-only limit
Evidence and retest owner

A demo is not a quality benchmark. No invented accuracy, savings, approvals or production readiness.

Record the handoff. Do not imply delivery.

Every case leaves with accepted ownership, evidence, a next action and a date.

SHARED HANDOFF

Stage + delivery route
Demo/blocker; tests and learning
Business + delivery owners
Next action, date and pilot/cleanup plan

EXTERNAL ACTION RECORDS

In production:
business owner + production evidence.
Submitted to CAF (external):
business owner + CAF reference.

A status update never deploys or submits. Confirm acceptance, support and eligibility separately.

Practice with a fictional case

Shipping FAQ helper. No customer data, real approvals or measured savings.

THE DEMO SLICE

Question -> search five fictional FAQs
-> source-linked answer draft.

Read-only. No shipment updates,
refunds or customer messages.

ASSESSING / UNASSIGNED

Unknown owner and attendance
Unknown sample/access approval
Unmeasured business value

Not in production. Not submitted to CAF.

Activity: compare FAQ search first. Record the review action, owner and date on the shared card.

Use guidance; still confirm permission

The public sources inform the materials. Your internal decisions remain separate.

Workbook page 15. Sources reviewed 9 September 2026. App runbook v1.1.0; project defaults.

Leave with three concrete things

Start with the files. The public web app and Copilot agent are optional.

A WORKING COPY

Word templates saved
in an approved location.

A VISIBLE CARD

One stage, one route
and honest evidence.

AN OWNER + DATE

Someone accepts the
very next action.

Download the playbook, slides and PDFs
